

**HINDU COLLEGE**  
University of Delhi

**Course Outcomes – Program Outcomes (COPO) Mapping and Attainment**

**Program Outcomes (PO): B.Sc. (H) Statistics**

**PO1:** This course exposes the students to the beautiful world of Statistics and how it affects each and every aspect of our daily life. The course is designed to equip students with all the major concepts of Statistics along with the tools required to implement them.

**PO2:** Introduction to computer software help them in analysis of data by making optimum usage of time and resources. This software gives them the necessary support and an edge when progressing to their professional careers.

**PO3:** Exposure to plethora of real-life data helps in honing their analytical skills. Having practical component with every paper invokes their exploratory side and fine-tunes the interpretation abilities.

**PO4:** Such a pedagogy goes a long way in giving them the required impetus and confidence for consultancy start-ups/jobs in near future. The structure of the course also motivates/helps the students to pursue careers in related disciplines, especially the data sciences, financial statistics and actuarial sciences.

**Course Outcomes (CO): B.Sc. (H) Statistics**

Sem	Code	Course	CO	Statement
I	32371101	Descriptive Statistics	CO1	Concepts of statistical population and sample, variables and attributes. Tabular and graphical representation of data based on variables.
			CO2	Conditions for the consistency' and criteria for the independence of data based on attributes. Measures of central tendency, Dispersion, Skewness and Kurtosis.
			CO3	Moments and their use in studying various characteristics of data. Different approaches to the theory of probability.
			CO4	Important theorems on probability and their use in solving problems. Concept of random variables and its probability distributions.
			CO5	Concept of joint, marginal and conditional probability distribution for two dimensional random variables and their independence. Univariate transformation and expectation of random variables.
II	32371202	Algebra	CO1	Theory of Equations The fundamental concepts of matrices and determinants
			CO2	Echelon form, Linear equations

			CO3	Rank of a Matrix, Characteristic roots and vectors
			CO4	Quadratic forms, Partitioning of matrices, Generalized inverse
III	32371301	Sampling Distributions	CO1	Laws of convergence, their inter relations and applications. Central Limit Theorem and its applications.
			CO2	Order statistics and distribution of sample median and range. Basic concepts of hypothesis testing, including framing of null and alternative hypothesis.
			CO3	Hypothesis testing based on a single sample and two samples using both classical and p-value approach. Chi square distribution.
			CO4	Analyse categorical data by using Chi square techniques. t and F distributions and their applications.
IV	32371401	Statistical Inference	CO1	Different methods of finding point estimators for unknown population parameters, their advantages and disadvantages. Desirable properties of point estimators based on which estimators can be compared.
			CO2	Methods to develop/find best point estimators based on the desirable properties (Using Cramer- Rao inequality, Rao-Blackwell theorem, and Lehmann-Scheffe Theorem). General methods of constructing interval estimators (Confidence Intervals) for unknown population parameters.
			CO3	Basic principle of Bayesian estimation (Finding posterior distributions of unknown population parameters). Developing/ constructing best/most powerful statistical tests to test hypotheses regarding unknown population parameters (Using Neyman-Pearson Lemma and Likelihood Ratio tests).
			CO4	Practical applications of estimation theory and hypothesis testing pertaining to all discussed methods.
V	32371502	Statistical Computing Using C/C++ Programming	CO1	Various data types, operators, library functions, Input/Output operations. Decision making and branching and looping.
			CO2	Arrays, Character and strings. User defined functions, recursion functions. Storage class of Variables.
			CO3	Pointers and arrays, arrays of pointers, pointers as function arguments, functions returning pointers. Structure, array of structures, structure pointers.
			CO4	Dynamic memory allocation functions. Pre-processors: Macro substitution, macro with argument. File inclusion in C/C++, I/O operations on files.
VI	32371602	Multivariate Analysis and Nonparametric Methods	CO1	The understanding of basic concepts associated with Multivariate Normal Distributions and their properties with special emphasis on Bivariate Normal Distribution.
			CO2	Analysing Multivariate data using data reduction techniques like Principal Component Analysis, Factor Analysis. Classification method namely Discriminant Analysis.
			CO3	Application of Wald's SPRT for testing simple null hypothesis vs simple alternative hypothesis along with the study of the O.C. function and the ASN function for various underlying continuous and discrete distributions.
			CO4	Testing of hypothesis using Non-Parametric tests like Median test, Runs test, U test, Kruskal Wallis test etc. and ability to use them judiciously for the testing of given data.

## Attainment of COs and POs in B.Sc. (H) Statistics

### Assessment Tools:

## CO Attainment Tools:

### Internal Assessment Score:

- The internal assessment score is determined as per the following rubrics:

Range (% of attempts $\geq$ 60%)	Level of Attainment	
$\geq 80$ %	3	High
$>70$ to $<80$ %	2	Medium
60-70 %	1	Low

### University Examination Score:

- The University examination score is determined as per the following rubrics:

Range (% of attempts $\geq$ 60%)	Level of Attainment	
$\geq 80$ %	3	High
$>70$ to $<80$ %	2	Medium
60-70 %	1	Low

### Overall CO Attainment

- The overall CO attainment is calculated on a scale of 3 by considering 80 % of the level of attainment from University examination and 20% of the level of attainment from Internal assessment.
