ENTHAPLY OF NEUTRALIZATION

Aim: To determine the enthalpy of neutralization of ethanoic acid with ammonium hydroxide using Hess' Law.

Introduction:

Heat involved during neutralization of an acid with alkali. The neuralization reaction of strong acid with strong base is essentially the combination of one equivalent of H^+ ion with one equivalent OH^-.

Enthalpy of neutralization is heat evolved when one gram equivalent of acid is completely neutralized by a base in dilute solution.

The chemical reaction is given below:

$$H^+_{(aq)} + OH^-_{(aq)} \longrightarrow H_2O \quad -13.76 \text{ kcal}$$

$$H^+_{(aq)} + Cl^-_{(aq)} + Na^+_{(aq)} + OH^-_{(aq)} \longrightarrow Na^+_{(aq)} + Cl^-_{(aq)} + H_2O \quad -13.67 \text{ kcal}$$

Where, 13.67 kcal released is the heat of neutralization for all strong acid and strong base.

Enthalpy of neutralization: When aqueous solution of acids and bases react, heat is evolved. This heat change accompanying a neutralization is termed as the heat of neutralization and is defined as the amount of het evolved when one gram equivalent of an acid is neutralized by one gram-equivalent of a strong base, both being taken as dilute aqueous solutions.

$$H^+_{(aq)} + base \longrightarrow salt + water + heat$$

Hess' law: According to this law, "The heat absorbed or released in a given chemical equation is the same whether the process occur in one step or a several steps.
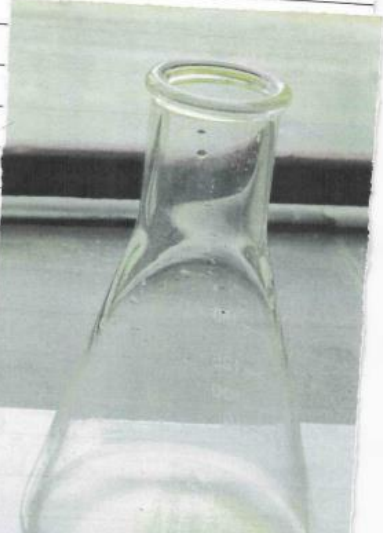

Polyunsaturated fatty acid:- Fatty acids that posses two or more than two c-c double bonds are mono-unsaturated.
eg:- Linoleic acid

ACID VALUE:- It is defined as the number of milligrams of KOH required to neutralise the present free fatty acid in one gram of any oil.
Lesser the acid value, better is the oil.

Procedure :-

2 g of given oil in a conical flask was taken. 25 mL of ethyl alcohol and two drops of phenolphthalein indicator was added to the conical flask. The contents were heated using water bath to dissolve the oil & then titrated against standardised KOH solution from burette drop wise.
Same procedure is repeated till a light permanent pink colour is obta -ined for at 20-30 seconds. The calculation -n was done and value of acid oil e

Life insurance is a contract between you and an insurance company. Essentially, in exchange for your premium payments, the insurance company will pay a lump sum known as a death benefit to your beneficiaries after your death. Your beneficiaries can use the money for whatever purpose they choose.

Need For Life Insurance

Buying life insurance protects your spouse and children from the potentially devastating financial losses that could result if something happened to you. It provides financial security, helps to pay off debts, helps to pay living expenses, and helps

EXPERIMENT-1

AIM: Microbiological sterilisation techniques and media preparation.

CHEMICALS REQUIRED: Nutrient agar (7 grams in 250 ml distilled water), Distilled water , alcohol.

APPARATUS REQUIRED: Heater, conical flasks,magnetic stirrer,weighing balance, spatula, sterilised petri-dish, measuring cylinder,Autoclave.

THEORY:

Nutrient agar is used for the cultivation of a wide variety of microorganisms. The medium is also used to subculture organisms for maintenance purposes or to check the purity of subcultures and for isolation of bacteria from water , wastewater, urine faeces and other materials.
Following table shows the composition of nutrient agar:

INGREDIENTS	1L	250 mL
Distilled water	1L	250mL
Beef Extract	1g	0.25g
Yeast Extract	2g	0.5g
Peptone	5g	1.25g
Sodium Chloride	5g	1.25g
Agar	15g	3.75g
